

# Topic Three: Angles and Compass Constructions

## Revision of Angle Facts

	Right angle	$90^\circ$
	Straight angle	$180^\circ$
	One revolution	$360^\circ$
	Acute angle	$0^\circ$ angle $< 90^\circ$
	Obtuse angle	$90^\circ$ angle $< 180^\circ$
	Reflex angle	$180^\circ$ angle $> 360^\circ$
	Complementary angles	$a^\circ + b^\circ = 90^\circ$
	Supplementary angles	$x^\circ + y^\circ = 180^\circ$

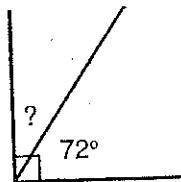

**Example 1**

Name the type of angle which has a measure of:

- (a)  $173^\circ$  — obtuse angle
- (b)  $200^\circ$  — reflex angle
- (c)  $3^\circ$  — acute angle

**Example 2**

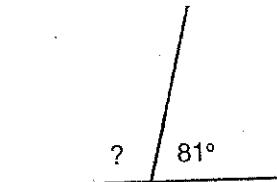

Give the complement of  $72^\circ$ .

$$\begin{aligned}\text{Complement of } 72^\circ &= 90^\circ - 72^\circ \\ &= 18^\circ\end{aligned}$$

**Example 3**

Give the supplement of  $81^\circ$ .

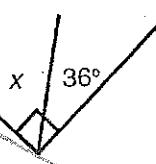

$$\begin{aligned}\text{Supplement of } 81^\circ &= 180^\circ - 81^\circ \\ &= 99^\circ\end{aligned}$$

**Example 4**

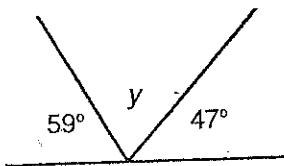

Find the value of the pronumeral in the following:

(a)

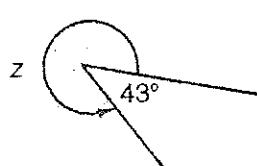

$$\begin{aligned}x &= 90 - 36 \\ &= 54^\circ\end{aligned}$$

(b)

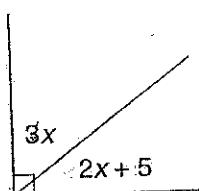

$$\begin{aligned}y &= 180 - 59 - 47 \\ &= 74^\circ\end{aligned}$$

(c)

$$\begin{aligned}z &= 360 - 43 \\ &= 317^\circ\end{aligned}$$

(d)

$$\begin{aligned}3x + 2x + 5 &= 90 \\ 5x + 5 &= 90 \\ -5 &\quad -5 \\ 5x &= 85 \\ x &= 17^\circ\end{aligned}$$

### Exercise 3.1

1. Name the type of angle which has a measure of:

- |                 |                 |
|-----------------|-----------------|
| (a) $132^\circ$ | (f) $33^\circ$  |
| (b) $163^\circ$ | (g) $92^\circ$  |
| (c) $49^\circ$  | (h) $337^\circ$ |
| (d) $205^\circ$ | (i) $301^\circ$ |
| (e) $253^\circ$ | (j) $109^\circ$ |

2. Give the complement of:

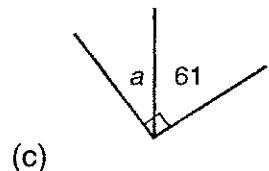

- |                |                |
|----------------|----------------|
| (a) $20^\circ$ | (e) $42^\circ$ |
| (b) $41^\circ$ | (f) $56^\circ$ |
| (c) $68^\circ$ | (g) $88^\circ$ |
| (d) $87^\circ$ | (h) $71^\circ$ |

3. Give the supplement of:

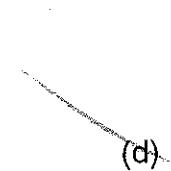

- |                |                 |
|----------------|-----------------|
| (a) $19^\circ$ | (e) $110^\circ$ |
| (b) $39^\circ$ | (f) $122^\circ$ |
| (c) $65^\circ$ | (g) $173^\circ$ |
| (d) $88^\circ$ | (h) $169^\circ$ |

4. Find the value of the pronumerals:

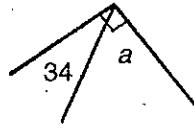

- (a) (b)

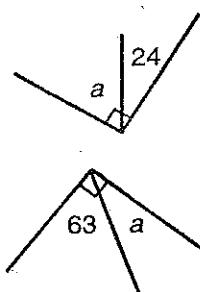

(c)

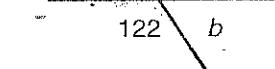

(d)

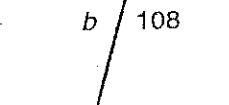

(e)

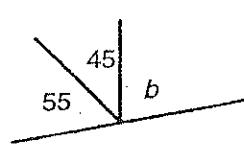

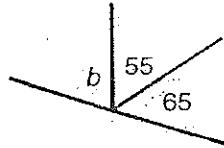

(f)

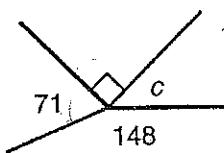

(g)

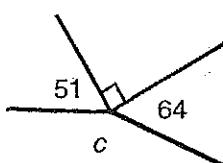

(h)

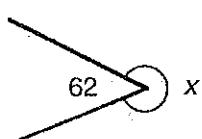

(i)

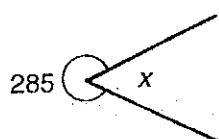

(j)

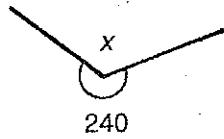

(k)

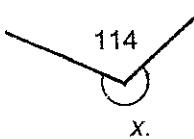

(l)

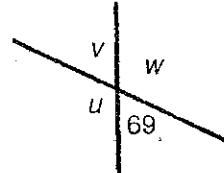

(m)

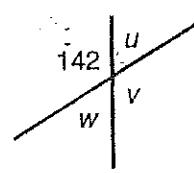

(n)

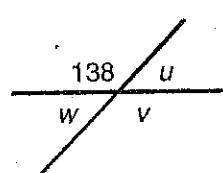

(o)

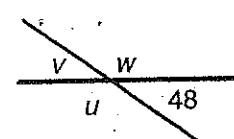

(p)

(q)

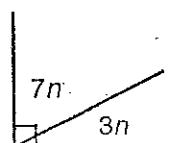

(r)

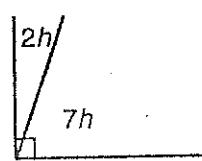

5. Use equations to find the value of the pronumeral:

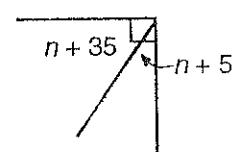

(a)

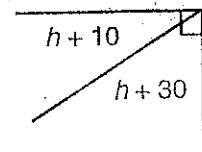

(b)

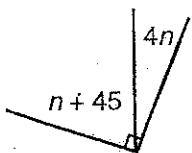

(c)

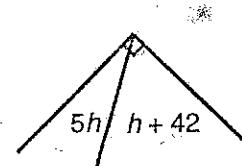

(d)

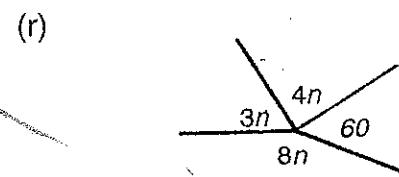

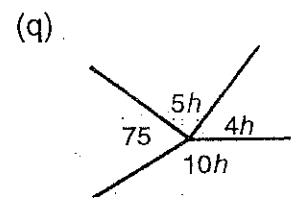

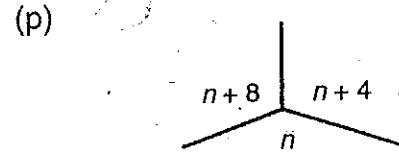

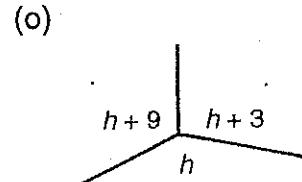

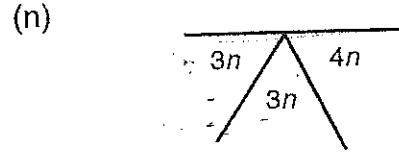

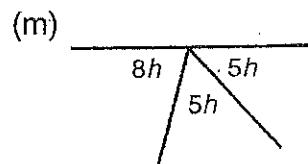

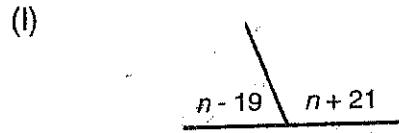

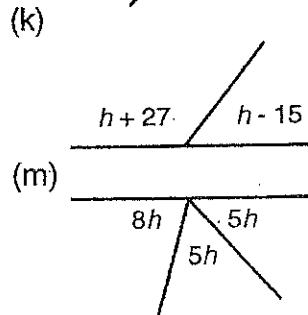

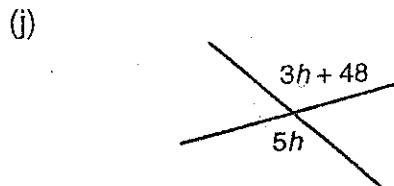

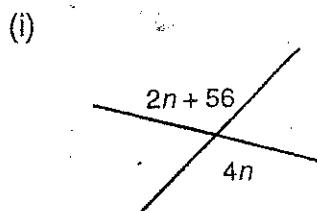

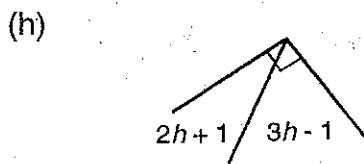

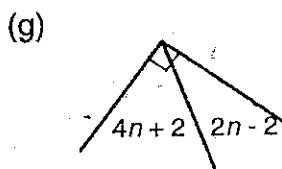

(e)

(f)

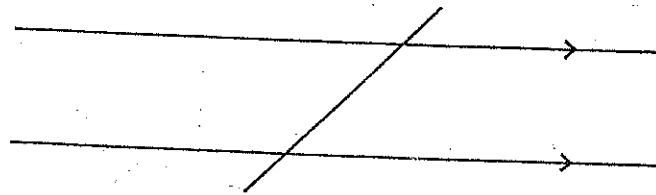

6. Through what angle does the hour hand of a clock turn in:
- (a) 4 hours
  - (b) 1 hour
  - (c) 15 hours
  - (d) 6 hours
  - (e) 30 hours
  - (f) 21 hours
7. Through what angle does the minute hand of a clock turn in:
- (a) 15 minutes
  - (b) 50 minutes
  - (c) 1 minute
  - (d) 8 minutes

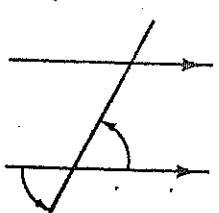

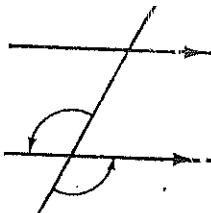

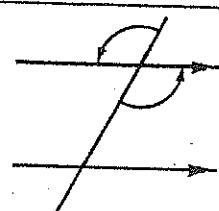

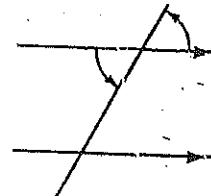

## Angles in Parallel Lines

When a pair of parallel lines are crossed by another line, eight angles are formed.

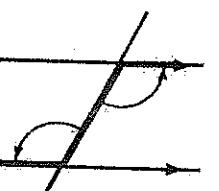

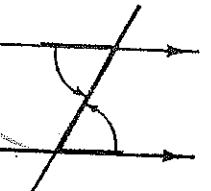

### Angle facts

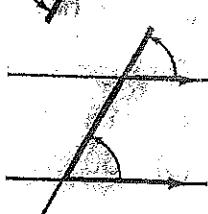

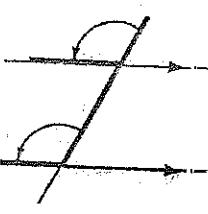

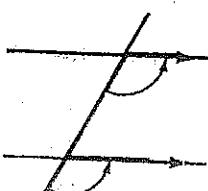

1. Pairs of vertically opposite angles are equal.

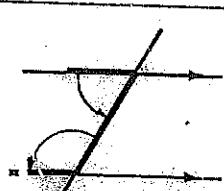

2. Pairs of alternate angles are equal. (Angles form a 'Z').

3. Pairs of corresponding angles are equal.  
(Angles form an 'F')

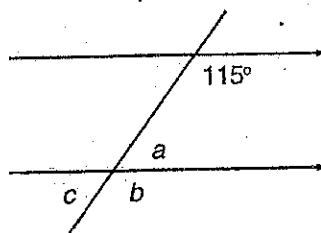

4. Pairs of allied (cointerior) angles are supplementary.  
(Angles form a 'C').

**Example**

Find the value of the pronumerals:

(a)

$$115^\circ + a = 180^\circ$$

$$\begin{aligned} \text{So } a &= 180 - 115 \\ &= 65^\circ \text{ (cointerior)} \end{aligned}$$

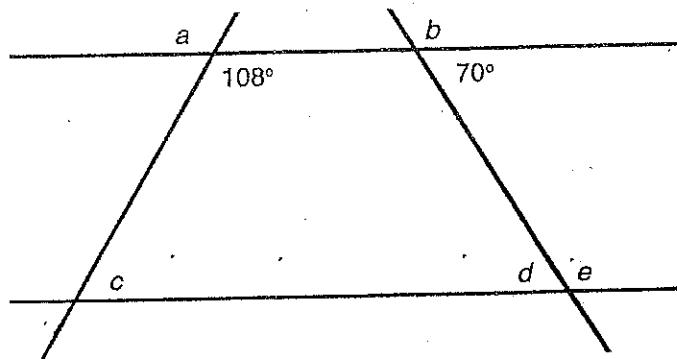

a and c are vertically opposite.

$$\text{So } c = 65^\circ$$

115° and b are corresponding.

$$\text{So } b = 115^\circ$$

(b)

$$a = 108^\circ \text{ (vertically opposite)}$$

$$b = 110^\circ \text{ (corresponding)}$$

$$c = 180 - 108$$

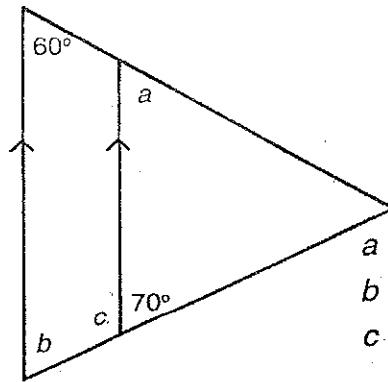

$$= 72^\circ \text{ (cointerior)}$$

$$d = 70^\circ \text{ (alternate)}$$

$$e = 180 - 70$$

$$= 110^\circ \text{ (cointerior)}$$

(c)

$$a = 60^\circ \text{ (corresponding)}$$

$$b = 70^\circ \text{ (corresponding)}$$

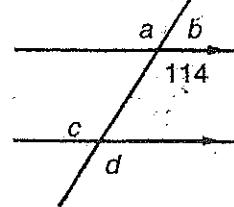

$$c = 180 - 70$$

$$= 110^\circ \text{ (cointerior)}$$

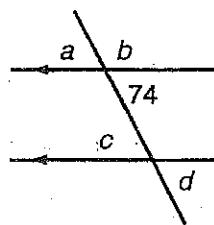

### Exercise 3.2

1. Find the values of the pronumerals:

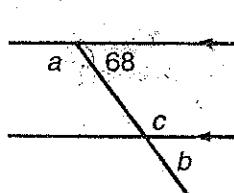

(a)

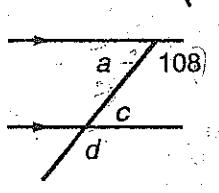

(b)

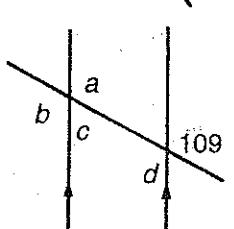

(c)

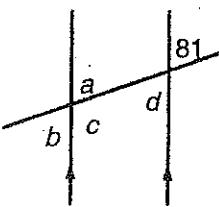

(d)

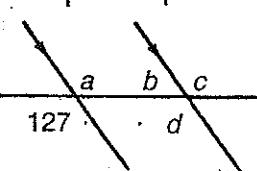

(e)

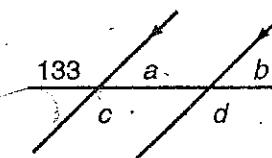

(f)

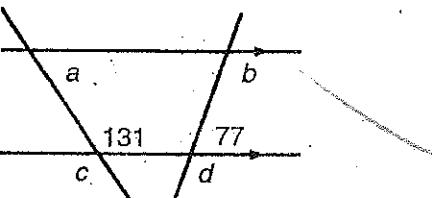

(g)

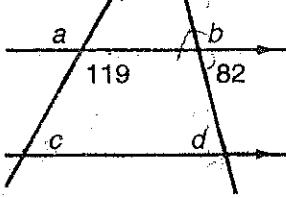

(h)

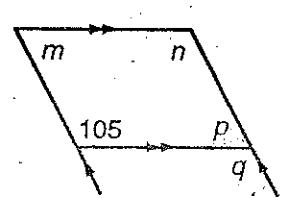

(i)

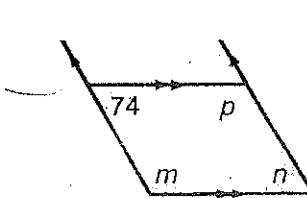

(j)

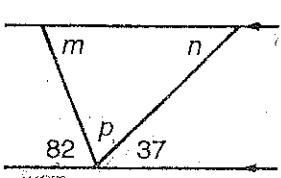

(k)

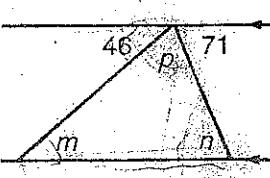

(l)

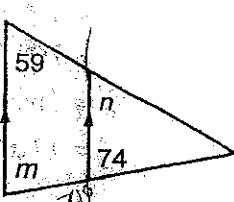

(m)

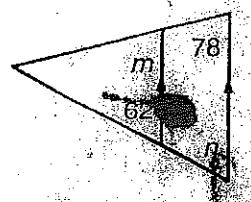

(n)

(o)

(p)

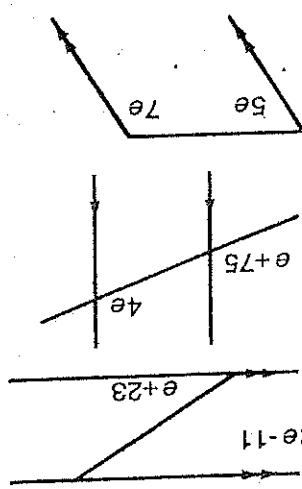

The sum of the angles inside a triangle =  $180^\circ$

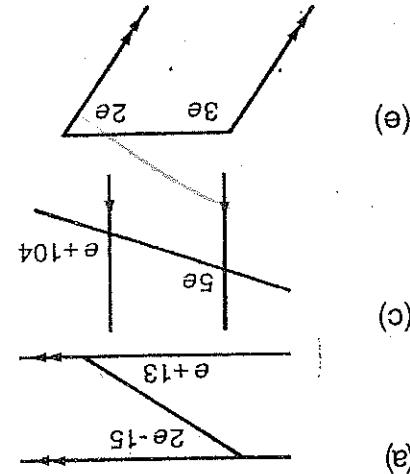

$$a + b + c = 180^\circ$$

Facts you should know about triangles!

**Examples** Find the value of the pronumerals:

(a)

$$\begin{aligned} a &= 180^\circ - 109^\circ - 47^\circ \\ &= 24^\circ \end{aligned}$$

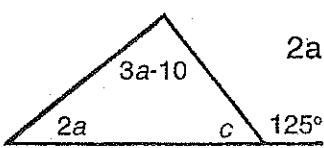

(b)

Isosceles triangle

$$\begin{aligned} \therefore y &= 75^\circ \\ x &= 180^\circ - 75^\circ - 75^\circ \\ &= 30^\circ \end{aligned}$$

(c)

$$\begin{aligned} c &= 180^\circ - 125^\circ \\ &= 55^\circ \end{aligned}$$

$$2a + 3a - 10 + 55 = 180^\circ$$

$$5a + 45 = 180$$

$$5a = 135$$

$$a = 27^\circ$$

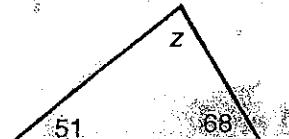

### Exercise 3.3

1. Find the value of the pronumerals:

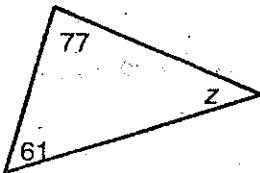

(a)

## Angles and Quadrilaterals

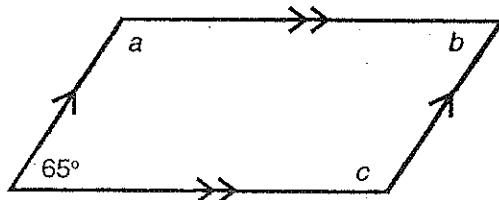

The angles inside any quadrilateral add up to  $360^\circ$ .

$$a + b + c + d = 360^\circ$$

**Examples** Find the value of the pronumerals.

(a)

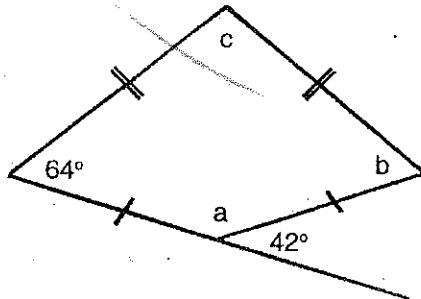

$$b = 65^\circ$$

$$\begin{aligned} a &= 180 - 65 \\ &= 115^\circ \end{aligned}$$

$$c = 115^\circ$$

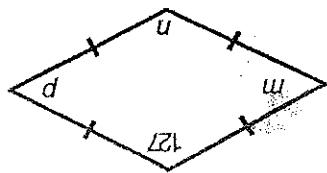

(b)

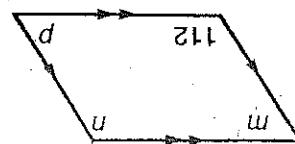

$$\begin{aligned} a &= 180 - 42 \\ &= 138^\circ \end{aligned}$$

$$b = 64^\circ$$

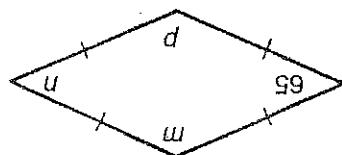

$$\begin{aligned} c &= 360 - 138 - 64 - 42 \\ &= 94^\circ \end{aligned}$$

(t)

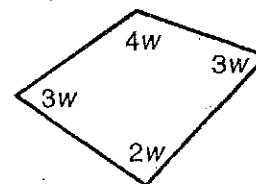

2. Use equations to find the value of the pronumerals:

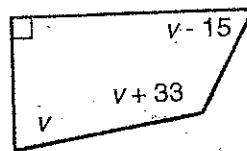

(a)

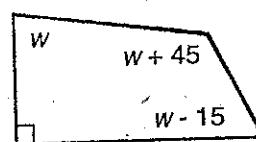

(b)

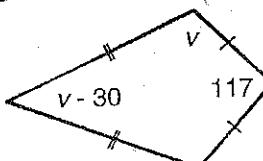

(c)

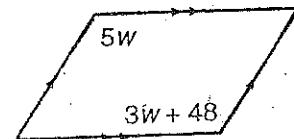

(d)

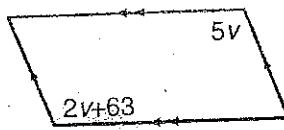

(e)

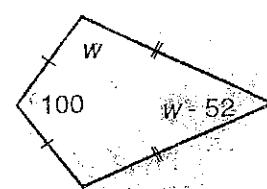

(f)

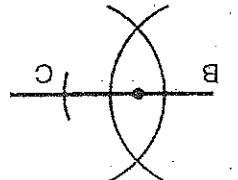

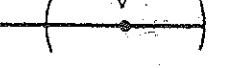

(g)

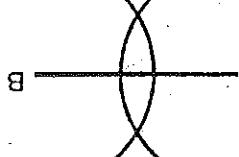

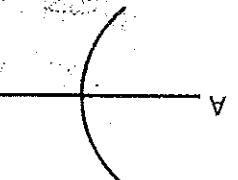

(h)

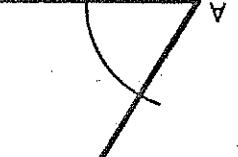

Draw arcs with centre A.	Draw arcs with centres at B and C.	Draw the perpendicular.
		

Perpendicular through a point on a line

Draw an arc with centre A.	Draw an arc with centre B.	Draw the perpendicular bisector.
		

Perpendicular bisector of a line

Draw an arc with centre at A.	Draw arcs with centres at B and C.	Draw the bisector.
		

Bisector of an angle

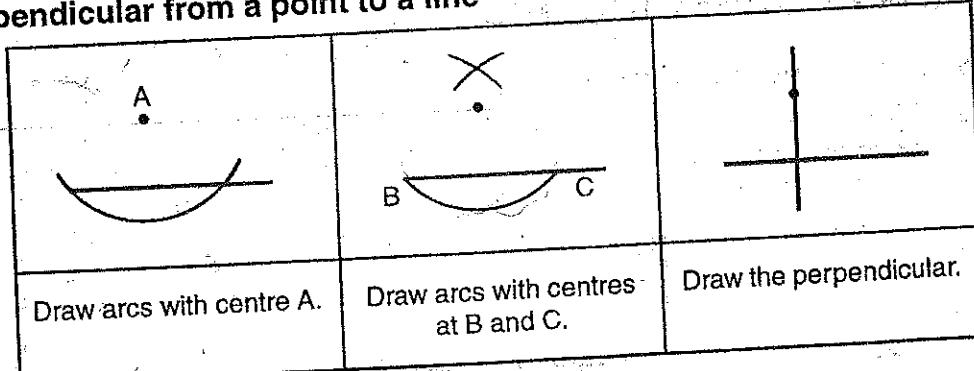

Draw an interval.	Draw arcs with radius AB and centres at A and B.	Draw the angle.
		

Angle of  $60^\circ$

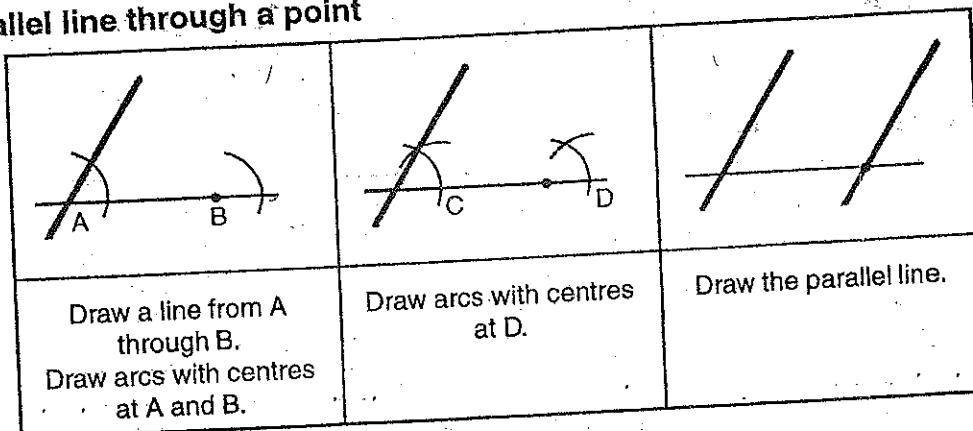

Below are six basic constructions:

## Compass Constructions

### Perpendicular from a point to a line

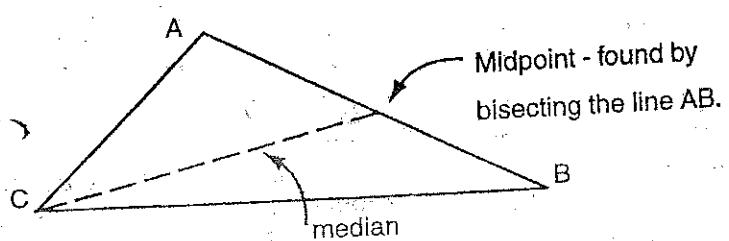

### Parallel line through a point

### Finding the Median

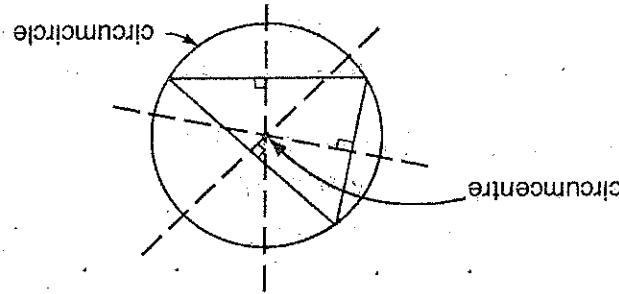

The line joining the point (or vertex) of a triangle to the midpoint of the opposite side is called the **median**.

The point of intersection of the medians of a triangle is called the **centroid**.

- For all these questions you will need a compass, a ruler and a sharp pencil.
- Exercise 3.5**
1. (a) Rule a line 6 cm long.
  - (b) Draw an angle of  $60^\circ$  on the line.
  - (c) Continue to construct an equilateral triangle.
  2. Construct a triangle with sides of 5 cm, 6 cm and 7.5 cm.
  3. Using your protractor, draw an angle of  $80^\circ$ . Now bisect the angle. Check your result with the protractor.

The circumcentre is the centre of the circumcircle, the circle which passes through all 3 vertices of the triangle.

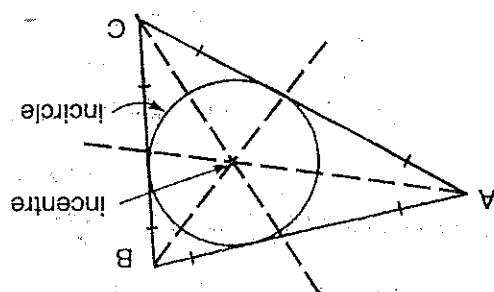

The point of intersection of the perpendicular bisectors of the sides of a triangle is called the circumcentre.

The point of intersection of the perpendicular bisectors of the sides of a triangle is called the circumcentre.

## Circumcentre and Circumcircle

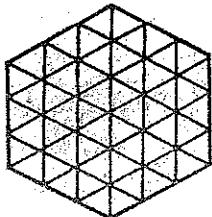

The incentre is the centre of the incircle, the circle which touches all three sides of the triangle.

The point of intersection of the angle bisectors of a triangle is called the

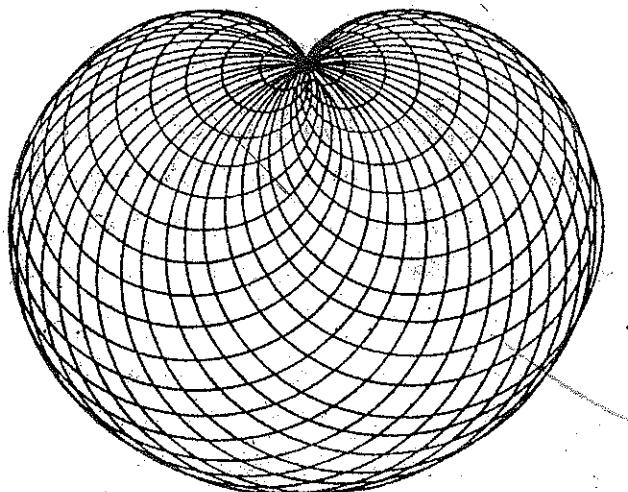

## Incentre and Incircle

4. Draw a line 11 cm long. Construct its perpendicular bisector.
5. Draw a angle of  $142^\circ$  using a protractor. Bisect the angle.
6. Draw a line 12 cm long. Mark a point, P, approximately 5 cm above the line. Draw a perpendicular from the point onto the line.
7. Draw a line 12 cm long. Make a point, Q, approximately 3 cm from one end. Draw a perpendicular at Q.
8. (a) Draw a triangle ABC with side  $AB = 8 \text{ cm}$ ,  $BC = 11 \text{ cm}$  and the angle at B,  $\angle ABC = 35^\circ$ .  
(b) Bisect BC and call the midpoint M.  
(c) Bisect AC and call the midpoint N.  
(d) Bisect AB and call the midpoint P.  
(e) Join AM, BN and CP. These are the **medians**.  
(f) Mark the point of intersection of the medians, G. G is the **centroid or centre of gravity** of the triangle.
9. (a) Draw triangle ABC as described in question 8.  
(b) Bisect each angle of the triangle.  
(c) Mark the point of intersection of these bisectors H.  
(d) With centre H, draw a circle which just touches all three sides of the triangle. This circle is called the **incircle** and it is the **incentre**.
10. (a) Draw triangle ABC as described in question 8.  
(b) Perpendicularly bisect BC, AC and AB.  
(c) Mark the point of intersection of these bisectors J.  
(d) With centre J and radius JA, draw a circle. This circle should also pass through B and C. It is called the **circumcircle** and J is the **circumcentre**.
11. (a) Draw triangle ABC as described in question 8.  
(b) Drop a perpendicular from A onto BC, from B onto AC and from C onto AB. These perpendiculars are called **altitudes**.  
(c) Mark the point of intersection of the altitudes K. K is called the **orthocentre** of the triangle.

- (a) Draw a circle of radius 9 cm.
- (b) Using your compass (with radius 9 cm) mark 6 points evenly around the circle.
- (c) Join the 6 points, forming a hexagon.
- (d) Divide each line of the hexagon into 3 equal parts.
- (e) Draw the grid as shown.
- (f) Erase some lines to form the star.
- (g) Add extra lines to form the diamond shapes.
- (h) Colour your design.

## 2. 12 pointed Star

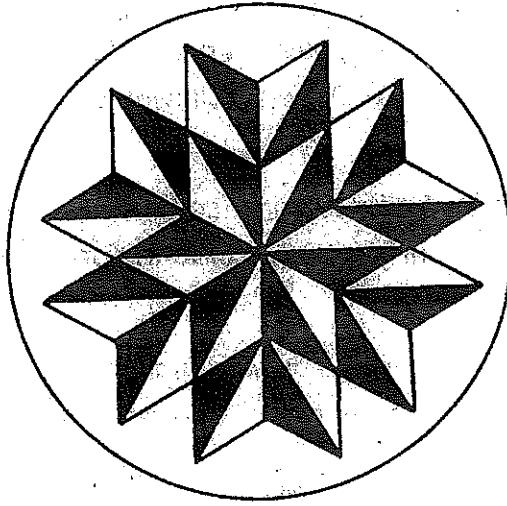

- circle that passes through the point A.
- (a) In the middle of your page draw a circle of radius 3 cm.
  - (b) Using a protractor, carefully mark off points around the circle every  $10^\circ$ .
  - (c) Label the lowest mark A.
  - (d) Using each point marked on the circle as a centre, draw a new

## 1. Cardioid

use the given pictures or invent your own colouring patterns.  
Remember to colour the finished design since this will improve it. You can complete designs.

Here are some fun designs to draw using a pencil, ruler, compass and protractor. Each design has instructions to follow and a picture of the

### Exercise 3.6 Geometric Designs and Patterns

### 3. Vanishing Circles

- (a) Draw a circle of radius 10 cm.
- (b) Draw lines from the centre to the circle at  $20^\circ$  intervals.
- (c) Using every second point of intersection on the circle, draw a semi-circle that just touches the two lines on either side.
- (d) From the original centre draw a circle that just touches each semi-circle.
- (e) Mark the points of intersection of the new circle and the  $20^\circ$  lines which lie between the semi-circles.
- (f) Using these points draw new semi-circles as before.
- (g) Repeat steps 4, 5 and 6 as often as possible.
- (h) Colour your design.
